

Defending the Human Person, From Conception to Natural Death

Did you know?

Commonly-Used
**BIRTH
CONTROL**
Kills After Conception

Several commonly-used birth control products (all types of the pill, all types of IUDs - *Intrauterine devices*, all types of morning-after-pills or “emergency contraception”, mini-pills, patches, rings, implants, injections and some others) often work after conception has taken place, thereby killing a newly conceived human being.^{1,2} All types of hormonal, chemical and metal-based birth control often work this way.

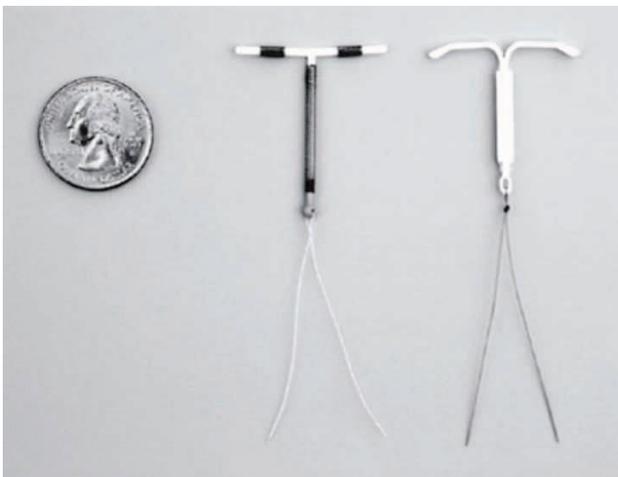

For the average woman using these products, this death of a new human being happens about once a year (more often with all types of IUDs) and it happens frequently with all types of the morning-after-pill.

Although these birth control products are presented as preventing ovulation or impeding sperm, they also rely on a third, less well-publicized, mechanism. Women can and do ovulate while using these products. When this happens and conception occurs, these birth control products will often

prevent the new human being from implanting her or himself on the uterine wall thereby killing him or her.^{1, 2} Implantation is essential as it provides nourishment and other necessities to the new human being. This mechanism is often referred to as “changing the endometrium”, the endometrium being the uterine wall. Using such a vague and imprecise phrase is meant to downplay the significance of what actually happens, so one sometimes has to dig for this information using both mainstream and alternative sources. For reasons of space, I have cited only two sources, but as all the types of birth control listed in the first paragraph contain the exact same or very, very similar active ingredients (except for copper IUDs which have a different composition, but still operate frequently after conception has taken place¹), so all of those types of birth control act in the same way on the body. Therefore, the conclusions of these two sources hold for all of the above types of birth control.

Birth Controls (cntd.)

These birth control products (including copper IUDs) pose significant and potentially fatal health and psychological dangers to women using them, including: stroke, breast and other cancers (the World Health Organization and the US government have classified them as class 1 carcinogens, the most dangerous cancer-causing products), fatal blood clots, depression, mood swings, liver disease, serious problems with later pregnancies and other illnesses. IUDs disintegrate or can break and perforate the woman's internal organs. These products alter some of the body's fundamental building blocks, causing health problems, including making a woman more susceptible to STDs. These birth control products can be especially damaging for younger women whose bodies are developing.

Pharmaceutical companies have paid out damages of billions of dollars involving hundreds of thousands of women who were injured by their birth control products. Many women are not aware that some of their health problems are actually caused by these types of birth control. Others will not talk about their health problems, especially mental health ones.

It is everyone's duty to inform women who are being or will be harmed by these abortion-causing products.

Commonly-used non-abortion-causing birth control (including condoms, vasectomy, diaphragms, withdrawal and spermicides) pose far less frequently occurring, but occasionally serious, dangers to the woman or man or baby. Condoms are much less effective against STDs than thought, including against fatal ones like HIV. This can be due to the condom slipping off or breaking or from mishandling by the user or the store or manufacturer error. Some STDs (e.g. HPV which can cause many serious and fatal diseases like some cancers) are also transmitted by the skin to skin contact of areas not covered by condoms. (...)

Both female sterilization and hysterectomies (through a different mechanism than that of the birth control products listed in the first paragraph) and Hormone Replacement Therapy (HRT) can also cause the death of a new human after conception and are also bad for a woman's health.

We would be pleased to provide additional medical and other professional sources from mainstream and peer-reviewed medical journals for all of the statements we have made above, to answer questions and to provide additional information. We can be reached at thefactsyuneedtoknow@yahoo.ca – Michael Kay (special to the Quebec Life Coalition.)

1. "Mechanisms of action of intrauterine devices: Update and estimation of post fertilization effects" by Dr. Joseph P. Stanford and Dr. Rafael T. Mikolajczyk in *The American Journal of Obstetrics and Gynecology* at [http://www.ajog.org/article/S0002-9378\(02\)00493-3/pdf](http://www.ajog.org/article/S0002-9378(02)00493-3/pdf) which concludes that "both prefertilization and postfertilization mechanisms of action contribute significantly to the effectiveness of all types of intrauterine devices."

2. "Current perspectives on combination oral contraceptives" by MA Smith and EQ Youngkin in *Clinical pharmacy* at <https://www.ncbi.nlm.nih.gov/pubmed/6386284> reports that "The contraceptive effects of estrogenic agents are related to modifications in ovulation, ovum transport, and implantation. The progestational agents act mainly by inhibiting ovulation and creating a hostile uterine environment." Combined oral contraceptives are those that contain both an estrogen and a progestin. "

Abortive Pill Coming this Fall – On Thursday, July 6, 2017, Quebec health minister Dr. Gaétan Barrette announced that the abortion pill Myfegymiso will be available as early as this fall and free to residents of the province. Such is the case despite the health dangers associated with the pill. A LifeSiteNews article states that since the Clinton administration approval of the pill in 2000, "so many women have died from sepsis (a serious infection involving the bloodstream) that the FDA was forced to issue a Public Health Advisory warning." Please write your MNA to express your disapproval of this decision.

UPCOMING EVENTS

Pilgrimage for Life

A Pilgrimage for Life is set for Saturday, August 26, 2017.

This day-long event will introduce participants to key battle sites in the clash between the culture of life and the culture of death.

The day begins at 7: 30 a.m. with mass at Mary Queen of the World cathedral, a fitting location to begin and offer our day's joys and sorrows to the universal mother.

Other locations of faith to be visited include Notre-Dame basilica, Notre-Dame-de-Bon-Secours chapel, Our Lady of Lourdes chapel, Blessed Sacrament sanctuary, Saint-Enfant-Jésus church, and Saint Joseph Oratory.

En route, we will stop to pray at a distinctively horrific array of abortion facilities - St-Luke Hospital, the Morgentaler centre, Clinique Médicale Fémina, Clinique Médicale de l'Alternatif, and Ste-Justine Hospital. At this latter location late-term abortions are practiced.

Further a special prayer stop will be done at the former location of the Morgentaler facility on St-Joseph Blvd, where for over twenty years upward of 60 000 unborn children lost their lives.

Pack a lunch. For further information, to register, or to reserve a walking stick, contact the office at: (514) 344-2686.

**Corn Roast**

Our annual Corn Roast is set for **Sunday, August 20, 2017.**

In addition to the fine food fare, participants will have the opportunity to visit our offices and take in an informal lecture.

Mr. Aubert Martin, Executive Director, Living with Dignity, has graciously accepted our invitation to address those gathered. His talk will survey recent legislations regarding euthanasia and assisted suicide in Quebec and in Canada. He will be available to field some questions at the end of his talk.

A playground for youngsters is available close by.

To reserve your lawn chair, call (514) 344-2686.

Corn Roast

- Sunday, August 20, 2017, Noon to 3 p.m.
- **Quebec Life Coalition**, 3330 Rivier Str, Mtl
- On the grounds of St. Émile Church (corner Sherbrooke and Davidson streets)
- Métro Joliette, bus # 67north, at 2nd stop
- Cost: \$10

Spaghetti Dinner QLC Fundraiser – fall Laval.
Date to be announced. Cost: \$10. Children, \$5.

40 Days for Life Prayer vigil for the end of abortion.
September 27, 2017 to Sunday, November, 5, 2017.

Life Chain coming Sunday, October 1, 2017. Location to be named.
