

## Hearst Elementary

Brrrr ... our first day back after winter break was a super cold one in pre-K! We took advantage of the Arctic blast by doing some water activities! When we got to school in the morning, we put containers of water in a variety of sizes outside and predicted how long it would take for them to freeze. We predicted the small cups would freeze before the large bowls.

We checked at lunchtime and found out the small cups of water were frozen solid! We could still see bubbles of water moving in the large bowls so that showed us they were not frozen solid. When we checked on them again after rest time, we still saw bubbles so we let them stay out overnight. We

brought the small cups of ice inside and had a "melt race" to see who could make their ice melt the fastest!

It was a very cool experiment!  
(Pun totally intended!)
