

# A better Comm Ave for...

**Walking:** safe, one-cycle crossings and raised crosswalks to protect you from turning vehicles

**Transit:** stop-light signal priority for the Green Line and buses for faster, more reliable transit connections

**Biking:** a cycletrack from end-to-end and protected intersections, to take a national lead on bike safety

**Driving:** calmer traffic, slower speeds, and reliable signal cycles so all people can move safely and easily

**Business:** loading zones for easy delivery; increased walking and bike traffic

**People:** a safe, open, and accessible street for all of us to live, work, and play

**Great progress so far!** Let's integrate these designs all along Commonwealth Ave to build a complete, livable street for all.
