Daily smoking rates for Māori and Pacific participants were significantly higher than for non-Māori non-Pacific participants. Daily smoking rates for Māori participants were over 5x higher than for non-Māori non-Pacific, with Māori girls reporting the highest daily smoking rates.

Daily & regular smoking continues to fall; never smoking continues to rise

Daily smoking decreases for both Māori and non-Māori non-Pacific continue to decrease. However, they may have slowed and may be approaching a threshold – at a threshold 5x higher for Māori.

Māori and Pacific smoking remains disproportionately high

Smoking status for participants in the 2017 ASH Year 10 Snapshot
