

# 2010 SUSTAINABLE CITIES INDEX

## WHAT IS THE SUSTAINABLE CITIES INDEX?

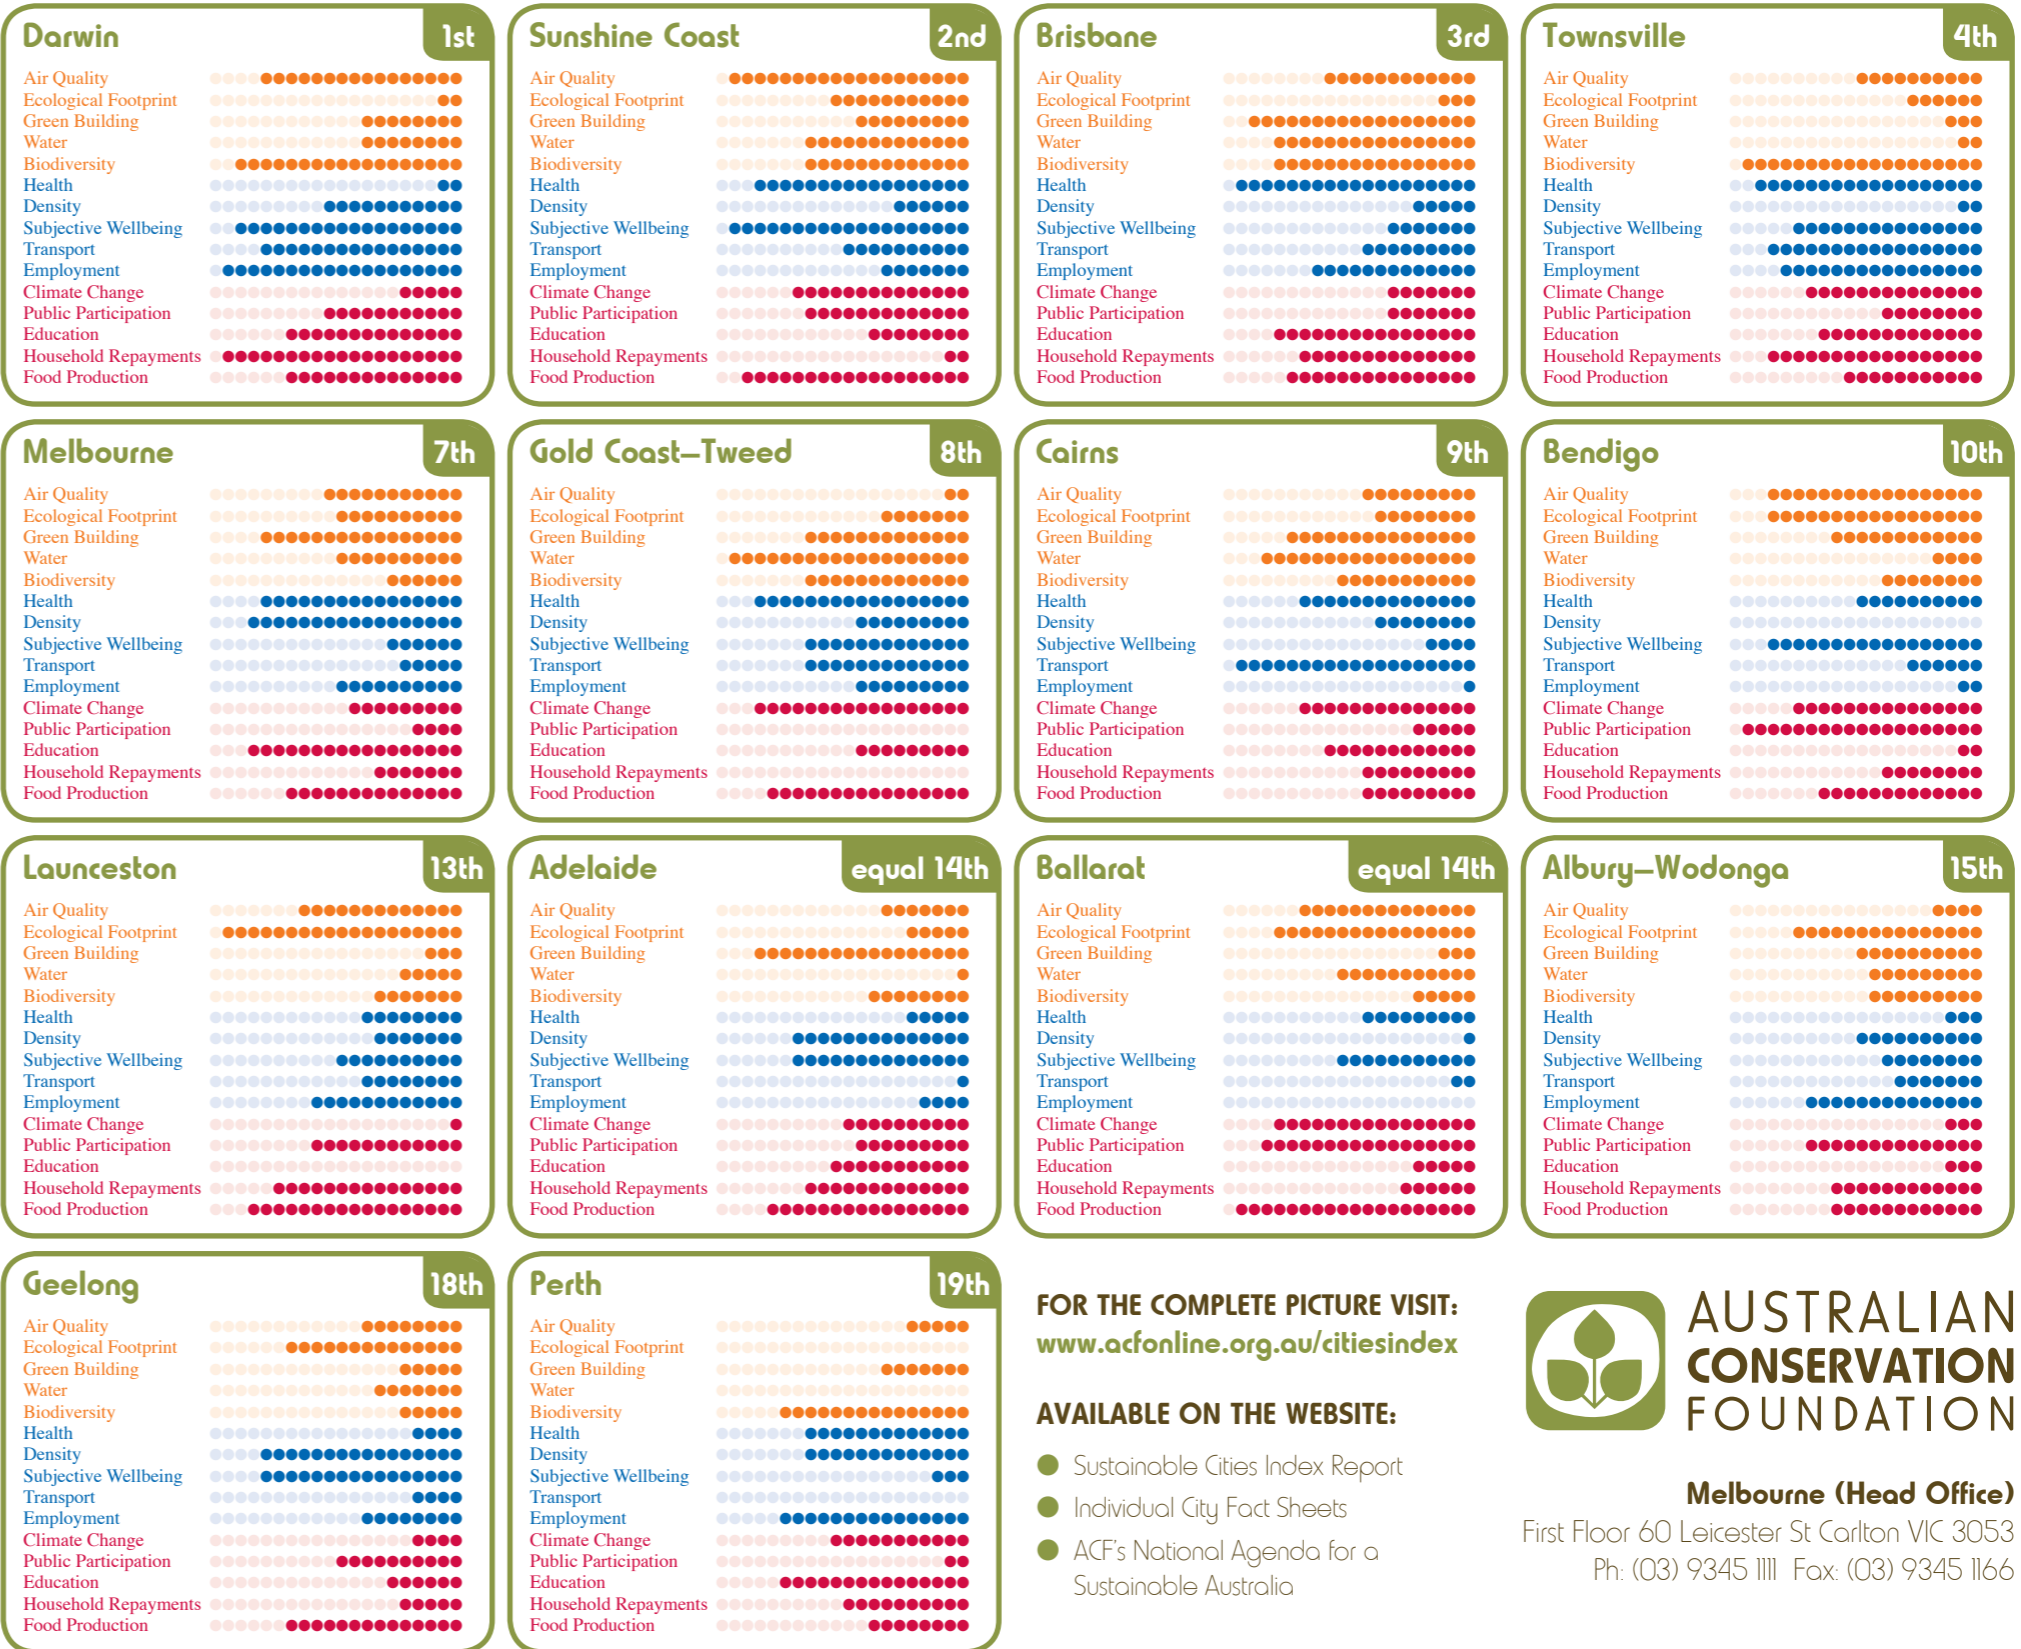

The ACF Sustainable Cities Index provides a snapshot of comparative performance in each of Australia's 20 largest cities, with the aim of encouraging healthy competition, stimulating discussion and suggesting new ways of thinking about our cities.

A rigorous compilation, assessment and independent review process established 15 indicators across three broad 'baskets':

● environmental performance, ● quality of life and ● resilience.

The cities were ranked in order of comparative performance from 1 (most sustainable) to 20 (least sustainable) across each indicator, with the total score determining the most and least sustainable cities for 2010 (indicated here).
