

LABOR IT'S TIME TO SHINE

Right now, the Reef, people, places and future we all value are under threat from climate change.

For too long our politicians have refused to acknowledge that mining and burning coal is hastening dangerous climate change that is leading to more heatwaves, bushfires, floods, droughts and more severe and frequent storms. Coal must stay in the ground.

Together we can push Labor to shine and build a 100% renewable future that is just and fair by:

- Collecting petition signatures to show the voice of the people,
- Having powerful conversations with politicians and
- Coming to rallies to show politicians that the people want climate justice now.

Take action on climate change to protect people from dangerous climate change, by shifting Australia away from coal and gas, towards 100% renewables - that starts with stopping Adani.
