

CALIFORNIA CEMENT MANUFACTURERS ENVIRONMENTAL COALITION (CCMEC)

FLOOR ALERT

AB 1395 (Muratsuchi) – OPPOSE

On behalf of the organizations listed, we must take an “**OPPOSE**” position on AB 1395 as amended on September 3rd. **AB 1395 mandates the California Air Resources Board (CARB) to establish new climate goals to achieve 90% emission reductions by 2045, leading to massive reductions in new housing construction, agriculture production, energy, transportation, and all manufacturing.** This is an extraordinarily aggressive goal that would require large-scale transformation of California’s entire economy.

We oppose AB 1395 for the following reasons:

- **Just five years ago, this Legislature passed SB 32 which sets a 40% GHG emission reduction below 1990 target by 2030. The state is in its first 8 months of implementing this new target and adding a new and more drastic target now is premature.**
- **It is estimated to cost Californians \$4 trillion dollars over the next 25 years.**
- **It is a regressive mandate that will hit those at the lower end of the income spectrum the hardest. AB 1395 would cost every household in California \$5,600 to \$10,700 annually.**
- **It makes building housing more expensive by a minimum of \$50,000 per home.**
- **Risk hundreds of thousands of California jobs and could lead to companies moving to other states or countries causing emission leakage.**
- **Threatens the role technology can play in reducing emissions, which contradicts scientific findings.**
- **CARB is currently, via the scoping plan, assessing how the state will meet the current goal, as well as a 2045 carbon neutrality goal. This work should be completed prior to the authorization of a new goal.**

For the reasons stated above we must **OPPOSE** AB 1395 and request a “NO” vote on this bill.
