

# Water Checklist

## Easy

- Stay aware of water restriction status and follow all Sydney Water requirements
- Collect water in buckets for gardens when coastal rain is forecast
- Fill reusable bottles with water and refrigerate as to not run a tap until water cools in summer
- Use the Sydney Water water saving tip guides
- Wash up in a smaller plastic tub and put the waste water on the garden
- Put a bucket in your shower and collect the cold water before you get in, then use it to water your garden

## Moderate

- Buy a shower timer and reduce the length of your shower and buy a water saving shower head
- When replacing plants, plant native/drought tolerant plants and turfs
- Fix leaky taps which can lose thousands of litres of water every year
- Get involved or donate to the Murray-Darling River fund
- If you can't do all these things, plant a tree or invest in offset plants

## Difficult

- Install rain tanks
- Install a grey water system
- Install a smart drip irrigation system for your garden with a timer to keep to Level 2 water restrictions.

## Hero Actions

- Establish public vegetable and herb gardens with irrigation to pool water intensive growing resources
