NOW
Understanding the Our Stats Dashboard
Look at trends between surveys!
Examine Descriptive Statistics (N & %)!
Customize your visualizations!
Step 1: Select the variable you would like to display.
Step 2: If you would like the dashboard to separate (or stratify) the data out by a second variable, choose a *grouping* variable.

*Grouping variable does not effect the map.*

e.g., See results separated for HIV-negative and HIV-positive men.
Step 3: Select which subset of participants you want to include in the maps.

E.g., See results for only HIV-positive men.
Step 4: Select which provinces you would like data displayed for.
Step 5: Select which surveys you want to display data for.

Note: some variables are only available for some years.
Step 6: Select “Province” or “Health Region” as the mapping unit.
Step 7: Display Boxplots to compare distribution of FSA values by province.
Step 8: Select whether you want to see a trend line.

**WARNING: 2015 Data was collected online, 2018 Data was collected in-person.
