

Petition

Action on climate change is already beginning to deliver thousands of jobs and exciting opportunities for businesses and workers in all sectors, providing real benefits for communities and working families across WA.

But we are only just getting started!

Now we need a clear target to guide our efforts on climate change and jobs. That's why Clean State is taking the next step to call for a state-wide Clean Jobs Target for Western Australia.

Join with West Australians supporting a Clean Jobs Target to harness exciting opportunities for action on climate change and deliver at least 350,000 clean jobs for WA workers by 2025.

Sign this petition to show your support for a clean jobs target that will deliver exciting opportunities for businesses and communities across WA and support workers in every sector.

What kind of jobs would the target cover?

The Target would cover both new jobs in clean industries, as well as existing jobs that can be made clean. This means almost any job in WA has the potential to contribute towards the Target.

Action on climate change can include improving energy efficiency, repowering with renewable energy, using electric vehicles, embracing clean manufacturing or farming practices, and making many other changes that save money and create jobs.

Many businesses and workplaces have already cut pollution to zero, becoming clean employers while saving money and growing their businesses.
