

Demonstration Garden Watering Instructions

1. Get the two buckets with hoses from the South Stairwell near the Water Garden. (Note: they are at the bottom of the stairwell, under the overhang so they don't fill with rainwater.)
2. Attach the hose with shut-off valves to the spigot at the end of the 550 Building. Make sure both valves are in the "Off" position.
3. Bring the end of the hose up the steps and across the lawn to the hedge. Do NOT walk through the hedge! Set the end of the hose down so you can reach it from the other side of the hedge.
4. Turn the spigot (2) on. Bring the bucket with the hose and watering wand through the SW gate and around to the park side of the hedge.
5. Connect the two hoses on the Park side of the hedge. Connect the wand to the end of the second hose, and make sure the wand is in the "Off" position. Turn the shut-off valve to the "On" position. (Leave the valve that is not connected to the hose in the "Off" position.)
6. Water the garden for 15 minutes. Use a sweeping motion with the wand set to "Shower." Hint: use the timer on your phone!
7. Turn the wand off. Turn the valve off. Release water in the hose by turning the wand back on and letting it drain. Separate the two hoses and recoil the hose with wand inside its bucket.
8. Turn the water off at the spigot. Release the water in the hose by turning the valve back on. Recoil the hose.
9. Return the buckets to the Stairwell (1).

Demonstration Garden

Watering Instructions - Bonus

Take photos of the Demonstration Garden so we can track growth and any issues.

Photo 1: Capture the side-by-side comparison of the historic and demonstration gardens.

Photo 2: Capture a “front-to-back” view of the historic and demonstration gardens.

Photo 3: Capture a closer view of the demonstration garden plants.

Send photos to info@fotmpdc.org. Please put the date in the file name.
