

CRIMSON ROSELLA NEST BOX

Bird
Nest Box

The inspection lid is an important monitoring feature of all nest box designs. It allows humans to inspect the box for inhabitants, feral pests or other nuisances which may disturb the target species. Inspection lids must be waterproof.

Measurements are in millimetres (mm).

Timber thickness 25mm.

The Crimson Rosella is shy and timid like the Eastern Rosella, hence, its nest box should also be placed 2-6 metres high. To prevent this parrot from deserting its nest avoid placing the nest box in heavy traffic areas or where they could be vulnerable to predators or pests. Regular inspection and prompt removal of feral inhabitants from the nest should be maintained.
