Re: Rainforest breaches at Sellers Rd coupe 892-508-0002

Upon investigation it was discovered that Cool Temperate Rainforest has been given an insufficient buffer in this coupe. The rainforest has greater than 70% canopy cover and an area of greater than 0.4 hectares. In accord with the code of forest practice, a buffer of 40 metres is appropriate for this type of rainforest. Attached are photos and GPS co-ordinates showing the extent of the breach.

A compliance officer will be alerted to this breach.
