

The Underlying Principles of Wholeness ~ *From the Mystic Heart of the World's Religions*

1. The Consciousness Principle:

Consciousness is a potentiality set in motion by an organic process. The independent investigation of truth expands our consciousness.

2. The Evolution Principle:

Evolution is purposeful and progressive. In all realms, all things change and evolve through a process of maturation, decline, and eventual renewal, always toward their inherent potential.

3. The Love Principle:

Love is the primary force of evolution. Love releases personal and collective potential to its fullest.

4. The Justice Principle:

Justice is the primary force for unity. Justice, equity, and moral rightness maintain the inherent balance of life.

5. The Transformation Principle:

Opposition is a catalyst for transformation. Adversity is necessary for progress and for transcending duality. Unity is the result of the conscious confrontation of opposing forces.

6. The Reality Principle:

Reality is one, and all of Creation is an indivisible whole. A single energy has created all things, caused them all to develop according to one law, and destined them all to one aim.

7. The Wholeness Principle:

Consciousness evolves toward wholeness and unity. A hidden wholeness builds bridges and removes boundaries.
