

QUEENSLAND MUST PLAY A LEADING ROLE IN THE TRANSITION TO CLEAN ENERGY

To stop damaging our climate, we know we must plan to rapidly phase out burning coal and gas for electricity and power our lives with clean energy instead.

By digging up and burning coal and gas, we are damaging our climate, harming our communities and warming our oceans. As a result, we have already lost almost a quarter of the Great Barrier Reef following the worst coral-bleaching event in history.

Investing in renewable energy will create thousands of long-term, good jobs across Queensland and will help safeguard precious places like the Great Barrier Reef for future generations.

Rooftop by rooftop, communities are shifting Queensland towards a sun-powered future. But to stop damaging our climate and protect the reef from further bleaching, we need to cut pollution fast and accelerate the transition to clean energy at a large scale. To do this, our government must step up and lead.

The Queensland Government has taken some positive first steps. It has set up a Renewable Energy Expert Panel to establish a credible pathway to power Queensland with 50 per cent renewable energy by 2030. It has also committed to a target of one million solar-powered households and businesses by 2020.

The trouble is, without visible community support, this 50% by 2030 commitment to clean energy could easily become all target and no action.

WE CALL ON THE QUEENSLAND GOVERNMENT TO:

- Make our renewable energy target law
- Phase out coal and gas-fired power
- Help people who work in affected industries and their communities prepare for jobs for the future
- Deliver large-scale clean energy projects across our state

SIGN THE SUN-POWERED QUEENSLAND PLEDGE

Whilst the Queensland Government has taken some positive first steps, there is no detailed plan for Queensland to achieve the renewable energy target, nor to retire our aging coal and gas fired power stations and replace them with clean energy.

As part of the Sun-Powered Queensland campaign we are building a broad, diverse and powerful network of individuals, businesses, organisations and communities that support an urgent transition to clean energy to ensure the Queensland Government implements concrete steps to meet the renewable energy target.

You can indicate your public support for the campaign by signing on to the **Sun-Powered Queensland Pledge**.

WHO CAN SIGN ON?

Anyone who agrees that we need the Queensland Government to lead on a transition to clean energy. From individuals to community groups, faith groups, businesses, unions and institutions. Details of the policy asks we are making of the Queensland Government are available if you're interested.
