Investment Strategy

- The Davy Low Carbon Equity strategy, invests in high QUALITY³ companies which demonstrate a combination of low carbon emissions and a high level of climate change mitigation, using a blend of quantitative and fundamental-based investment approaches which we call 'Quantamental' investing.
- We believe climate change represents the largest ESG business risk to companies in operation today and companies, which adapt to a low carbon future, while displaying high QUALITY fundamentals, represent superior long-term investments.
- In our opinion, stocks which exhibit the characteristic of QUALITY will deliver consistent superior risk adjusted performance over the long term. The strategy focuses on companies which offer a combination of high QUALITY and strong climate change mitigation to build a high conviction portfolio from the bottom up.

Investment Process

- Climate change considerations are integrated across the investment process, including; idea generation, fundamental research, valuation, engagement, portfolio construction, risk management and reporting.
- The team uses a proprietary research methodology to identify companies effectively mitigating climate change in their business while adapting their products and services for a low carbon future.
- The strategy does not invest in companies which are involved in the exploration, extraction or burning of fossil fuels for profit.
- Company engagement is used to support fundamental research and drive improved performance on key climate change issues. All engagements are investor-led.

Performance

Returns (%) as at March 31st, 2020
