maker lab for kids and teens

Bit Space is Chicago's premier maker lab for kids and teens,

a place where they can learn to use real tools to build real things. We try to live up to our goal of inspiring and guiding the next generation of inventors, entrepreneurs, and problem solvers by teaching kids and teens to be producers rather than consumers of technology. Our guides are experts from the fields of architecture, design, engineering, and computer programming.

open shop

An after-school and weekend program that allows kids and teens to work on design and build projects under expert guidance.

day-off camps

Fun and engaging full-day camps for when students have a day off from school.

parties

A unique and creative way to celebrate a birthday or special event

Week-Long Camps

Summer camp at Bit Space is week-long, project-based learning for kids and teens. Each week, we introduce a set of tools, techniques, software, and materials to three age groups. Using the week's theme as a starting point, campers work individually, in small groups, or as a team to create something that explores, expresses, and expands upon their skills and creativity, and culminates in an exhibition of their work on Friday.
