

Kooyong Climate Change Alliance
Candidate Scorecard

Candidate Questionnaire

Name:

Jana Stewart

Political Party:

Australian Labor Party

Please tell us about your general views on climate change

1.1 Do you accept the views of climate scientists that

- The earth is already too hot?
- We face a climate emergency?
- Greenhouse gas emissions must be reduced to zero as fast as possible?

Comments/Explanation/Extended Response:

I accept the science of global warming and acknowledge that we face a climate emergency.

I believe it is our responsibility to act quickly so that we do not burden our children and future generations when action will be harder and more expensive.

As a Party, Labor will take strong action on climate change to mitigate the risks and impacts of climate change on Australian society and economy, and to take advantage of the opportunities transitioning to a low pollution economy represent for workers, businesses and Australia more broadly.

1.2 Are you committed to supporting implementation of evidence based policies consistent with restricting global warming to 1.5 degrees C?

Comments/Explanation/Extended Response:

As a Party, Labor commits to reducing carbon pollution in line with the Paris Accord goal of limiting global warming to less than 2 degrees above pre-industrial levels and taking efforts to limit warming to 1.5 degrees above pre-industrial levels.

Any other comments on your general views on climate change:

The remaining questions are intended to inform us about the specific climate change policies and actions you are committed to and that you undertake to advocate for and otherwise support as our representative in Federal Parliament if elected. In the following therefore, where the word “support” appears, please consider it to mean “advocate for and support”.

2. Greenhouse Gas Emissions Targets

2.1 What emissions reduction targets will you support?

Reduction by 2030 (% relative to 2005):

45%

Reduction by 2050 (% relative to 2005):

Net Zero

Target year for zero emissions:

2050

Will you support the exclusion of any carry-over credits from the Kyoto agreement in the calculation of emissions reductions against these targets?

Yes

No

Comments/Explanation/Extended Response:

The Labor Party has ruled out using carry over Kyoto credits. We are committed to real cuts to our carbon pollution, not dodgy accounting tricks.

2.2 Will you support excluding international offsets in the measurement of Australia’s emissions reductions? Yes No

Comments/Explanation/Extended Response:

Labor will make it easier for covered businesses to meet any offset obligations by allowing for the creation (and sale) of offsets if emissions fall below baselines, **allowing for the (limited) use of international offsets**, and exploring the option of allowing offsets to be generated in the electricity sector, boosting offset supply through Carbon Farming revitalisation reforms.

3. Emissions Reductions

3.1 Will you support the following economy-wide initiatives to reduce emissions? :

A price on carbon

New regulations that set emissions limits and penalties

Comments/Explanation/Extended Response:

A Shorten Labor Government will extend the Government's existing framework, the Safeguard Mechanism, to cut pollution for Australia's biggest polluters (about 250 companies), while supporting competitiveness and jobs.

- **Coverage:** Labor's Safeguard Mechanism will look to cover facilities polluting more than 25,000 tonnes of direct CO2 emissions, consulting with industry and experts on this threshold and its phase-in. Facilities in the electricity sector will not be covered by the Safeguard Mechanism, but will be covered under Labor's National Energy Plan.
- **Target:** The mechanism will reduce total pollution by covered entities by 45 per cent (on 2005) levels by 2030, but Labor will consult with industry on the baselines and trajectories that apply to each covered entity. Labor will provide tailored treatment for emissions intensive trade exposed industries (EITEs) to ensure they face comparable impacts from climate change policies as their competitors do in relevant international markets.
- **Renewable energy:** Labor will also ensure that 50 per cent of the nation's electricity is sourced from renewable energy by 2030. This will be backed by a \$10 billion capital investment into the Clean Energy Finance Corporation and a new \$5 billion Energy Security and Modernisation Fund to drive investment in new generation and energy networks.

3.2 What other economy-wide measures will you support to reduce emissions? (Note that specific measures related to energy generation, transport and specific industries are covered separately below).

In addition to transition from fossil fuel and private transport increases in the safeguard mechanism for heavy polluting industries and carbon farming initiatives. Labor has an economy wide energy efficiency program.

Labor will end the Government's negligence when it comes to energy efficiency. We will implement a comprehensive set of measures to get Australia on track to a more productive and lower energy cost economy, cut power bills for households and businesses and reduce pollution.

These measures will include:

- Allowing ARENA to support energy efficiency: ARENA is currently restricted to providing support for projects that include a renewable energy component. Allowing ARENA to support energy efficiency projects more broadly will support industry to develop new and innovative solutions to cut energy waste.
- Re-focusing the efforts of the Clean Energy Finance Corporation (CEFC): To support Labor's \$10 billion re-investment into the CEFC, Labor will increase the CEFC's focus and support for energy efficiency projects, new commercial community renewables projects and industrial transformation by consolidating some of its disparate programs into these three program streams.
- Manufacturing Energy Efficiency Accelerator program (MEEA): Labor will establish one thousand \$20,000 grants for Australian manufacturers over four years to 2022-23 to engage experts to provide manufacturers with preliminary advice on energy management and improvement, such as data gathering and analysis, data gathering, engaging service providers and ongoing support.
- Developing an accreditation system for energy auditors and training programs for manufacturers, with a commitment of \$10 million of funding support over four years to 2022-23.
- Revitalise energy efficiency reforms at COAG: Labor will commit up to \$10 million over four years to 2022-23 for an Energy Affordability and Productivity Review that will enhance COAG's National Energy Productivity Plan, reform energy efficiency governance, support the harmonisation state based Energy Efficiency Obligation schemes, and revitalise COAG's efforts to introduce a National Home Comfort Rating System.

3.3 What initiatives will you support to reduce emissions in manufacturing industry?

In addition to the energy efficiency measures noted in the previous answer, Labor will:

- **Establish a Strategic Industries Taskforce** to undertake in-depth engagement with strategic industries to support competitiveness and cut pollution by developing and delivering industry specific Low Carbon Strategies. Solutions will be tailored to the challenges and opportunities of each industry, taking into account technological and other barriers to cutting pollution and protecting long term competitiveness. Solutions could include targeted assistance to developing new low pollution technologies and processes and enabling firms to more easily invest in energy efficient capital and low emissions technologies, products and processes. As well as industry, the Taskforce will work with a range of experts, including ARENA, the CEFC, the CSIRO, unions and peak bodies.
- **Establish a Strategic Industries Reserve Fund of \$300 million** over six years. This Fund will support the ongoing competitiveness of strategic industries, helping to deliver on industry specific Low Carbon Strategies, as well as other recommendations of the Strategic Industries Taskforce.
- **Other Labor policies** will also provide support for businesses of all sizes and sectors in this transition, including our Australian Investment Guarantee, supercharged CEFC, Advanced Manufacturing Future Fund and energy efficiency measures, including the Manufacturing Energy Efficiency Accelerator program.

3.4 What initiatives will you support to reduce emissions in agriculture?

A Shorten Labor Government will:

- Support the meat industry's commitment to be carbon neutral by 2030 through a Strategic Meat Industry plan, with funding of \$2 million over the forward estimates.
- Review and strengthening the CFI with the aim of increasing land sector abatement opportunities and ensuring CFI methodologies are robust. This will include exploring the establishment of 'premium' land sector credits which provide substantial environmental, biodiversity and other co-benefits.
- Improve integrity and growth of the offset market by boosting carbon farming methodology research and development (\$40 million over forward estimates) and introducing a carbon assessment standard.
- Develop and deliver a National Forestry Summit and a National Forestry Strategic Plan, to support the growth of a more sustainable and prosperous forestry industry.

3.5 What initiatives will you support to promote reforestation, afforestation and restoration of biodiverse natural environments to increase greenhouse gas drawdown?

A Shorten Labor Government will support reducing land sector pollution by ensuring the Federal Government can intervene to put in protections to stop broad-scale land clearing. Where states properly regulate land clearing, such as Queensland, Labor will take no action. Importantly:

- Labor will build new tools and maps that help landholders understand if they are required to consider the federal land clearing protections (\$8 million over the forward estimates). This will be a quick and simple online process designed to make it easier for farmers to know if they need to comply with protections.
- Labor will work with the states to bring the rest of the country in line with Queensland's reporting of land clearing by implementing the state's ground-tested SLATS system nationwide, and re-invigorating COAG's National Vegetation Management Framework. Native title holders and tradition owners of the land would be exempt from land clearing protections while we consult with them on land clearing laws.
- **Reviewing and strengthening the CFI** with the aim of increasing land sector abatement opportunities and ensuring CFI methodologies are robust. This will include exploring the establishment of 'premium' land sector credits which provide substantial environmental, biodiversity and other co-benefits.
- **Improving integrity and growth of the offset market** by boosting carbon farming methodology research and development (\$40 million over forward estimates) and introducing a carbon assessment standard.

- Labor will develop and deliver a National Forestry Summit and a National Forestry Strategic Plan, to support the growth of a more sustainable and prosperous forestry industry.

3.6 Will you support strengthening the Climate Change Authority with additional funding and expertise, and elevating its role in providing evidence based policy advice to Government?

Yes

No

Comments/Explanation/Extended Response:

Labor will restore Australia's domestic climate change institutions by restoring and reforming the Climate Change Authority and implementing triennial Climate Change Assessments.

To support independent expert-driven advice to Government, Labor will commit \$24 million over the forward estimates to reverse the Government's abolition of the Climate Change Authority and ensure that it continues to be appropriately resourced to achieve its role.

3.7 Will you support amendment or replacement of the *Environment Protection and Biodiversity Protection Act* to ensure climate change impacts are a key consideration in all environmental assessments? Yes No

Comments/Explanation/Extended Response:

Australia needs new frameworks for truly national protection and management of Australia's natural resources to enshrine federal leadership in proactive and systemic protection of our environment from threats such as climate change.

Labor will:

- Deliver a new Federal Environment Act within the first term of government;
- Ensure the knowledge and rights of Aboriginal and Torres Strait Islander peoples are central in environment protection laws, programs and policies;
- Create strong, well resourced, science based, independent institutions to administer the law: a federal Environment Protection Authority to provide transparent and timely development approvals within a clear decision-making framework and enforcement and a National Environment Commission to provide federal leadership on environmental policy and create legally binding national plans and standards to proactively protect the environment;
- Implement clear management, governance and decision making structures and responsibility that are transparent, efficient and streamlined, relating not only to development applications but also priorities for proactive protection;
- Provide consistent, national standards and adequate, publicly available data for decision making;
- Improve regulation and streamline environmental assessment processes;

- Restore democracy, respect and protection of rights for civil society involvement in environmental matters;
- Manage Australia’s environment fairly and efficiently as a foundation for ecologically sustainable jobs; and
- Protect biodiversity and support resilience in the natural environment.

3.8 What level of funding will you support to the Green Climate Fund (under the Paris Agreement) to promote climate action in developing countries?

Labor will retain Australia’s commitment to international climate finance, in line with the shared international goal of mobilising public and private funds to assist vulnerable communities address climate change.

What other strategies will you support to assist climate action in developing countries?

A Shorten Labor Government will revive Australia’s international engagement on climate change by:

- **Re-instituting and re-badging the Climate Change Ambassador:** Labor will re-institute and re-badge the position of Climate Change Ambassador. The Climate Change Ambassador will have two areas of immediate priority – exploring the potential of bilateral trading agreements to support Australia’s domestic climate change policies, and leading climate change engagement within our region, with a focus on the Pacific. This will be funded through existing departmental resources.
- **International assistance on climate change:** Climate change will be a priority for Labor’s international development program. Australia’s Pacific neighbours are particularly vulnerable to the impacts of climate change. A Labor Government will engage our Pacific neighbours bilaterally and through regional fora such as the Council of Regional Organisations of the Pacific, the Pacific Islands Forum, the Pacific Community and the secretariat of the Pacific Regional Environment Program, to provide leadership, assistance, and advice on climate change issues.

4. Clean Energy Targets

4.1 What targets for generation of electricity by renewables will you support?

% renewables by 2025:

50% by 2030

% renewables by 2050:

Net zero by 2050

Target year for 100% renewables:

Comments/Explanation/Extended Response:

Labor will ensure 50 per cent renewable energy by 2030 be net carbon neutral by 2050.

4.2 What is your target year for 100% renewable energy production by industry across all sectors?

Comments/Explanation/Extended Response:

Labor will ensure 50 per cent renewable energy by 2030 be net carbon neutral by 2050.

5. Transitioning to renewables

5.1 Will you support the following steps to help achieve the transition to renewables?

Ruling out the addition of new coal fired power generation to the grid;

Ruling out the addition of new gas power generation to the grid;

Ruling out government underwriting or public funding in any form to support fossil fuel energy generation;

Adding greenhouse emission reductions to the National Energy Objective;

Phasing out existing coal fired power stations; by when?

Yr:

Comments/Explanation/Extended Response:

Coal and gas will continue to be part of Australia's energy mix into the future – but new coal power plants in Australia are a fantasy. Every serious investor has made it clear that they are not interested in building new coal-fired power stations and Labor does not support giving taxpayer money to support new coal-fired power stations.

The cheapest generation comes from renewables and storage, including batteries, pumped hydro, gas peaking plants and demand management. This is what will drive Australia's energy transformation into the foreseeable future.

A number of ageing coal-fired power stations will reach the end of their technical life in the

coming years – 75 per cent of coal-fired power stations are already operating beyond their original design life.

Labor has a plan for a just transition to a clean energy economy. Our plan will ensure workers and communities impacted by inevitable coal-fired power station closures aren't left behind in the transition that's already under way.

5.2 Please provide details of the funding levels you will support to promote renewables, including grants and tax incentives for industry and consumers, and also including funding levels for ARENA and the CEFC.

A Shorten Labor Government will:

- **Double the original investment in CEFC** by \$10bn to support new generation and storage, concessional loans for household purchases of solar and battery systems, commercial community renewables projects and the transformation and growth of new and existing industries.
- **Future-proof our energy networks** by creating a \$5bn independent Energy Security and Modernisation Fund. This will build and upgrade Australia's energy transmission and distribution systems, including transmission links to Renewable Energy Zones, to unlock the supply of cheaper, cleaner energy.

Labor established ARENA and remains committed to ARENA and their important work in tackling climate change including by supporting Labor's Hydrogen Plan and Energy Efficiency Policy.

5.3 What other strategies will you support to encourage the transition to 100% renewables? Please include details of funding where relevant.

A Shorten Labor Government will:

- **Encourage the uptake of household solar and battery systems** by setting a target of one million household battery systems by 2025 and providing a \$2,000 rebate for 100,000 households on incomes of less than \$180,000 per year to purchase and install battery systems, as well as low-cost loans for households.
- **Establish a Neighbourhood Renewables Program** to ensure renters and social housing residents can benefit from cheaper and cleaner renewable energy. Labor will establish community power hubs to support the development of projects in local communities – such as solar gardens on apartment rooftops, community wind farms and energy efficiency upgrades for social housing.

5.4 What measures will you support to assist communities affected by the transition away from fossil fuel energy generation?

A Shorten Labor Government will:

- **Establish an independent Just Transition Authority (JTA)** to plan and coordinate the structural adjustment response to inevitable future station closures. The JTA will be a statutory body that works with companies, workers, unions, local communities, state governments and other Commonwealth departments to:
 - Develop and implement transition plans for affected regions, including economic diversification.
 - Develop and oversee pooled redundancy schemes.
 - Develop and administer labour adjustment packages The JTA will ensure that representatives from the energy industry, unions and the local communities have direct input into its operations. The establishment of the Authority will have a budget cost of \$8.5 million over the forward estimates.
- **Require all large generators to provide at least three years notice of closure**, as recommended by the Finkel Review and enshrined in an Australian Energy Market Commission rule. Sufficient notice is critical to plan for the economic diversification of a region, put in place worker transition plans, replace generation capacity and maintain energy security.

5.5 What incentives will you support to promote a clean energy export industry?

Labor believes hydrogen represents a huge export opportunity, with the global market for hydrogen expected to be worth \$215 billion by 2022 according to the International Energy Agency.

A Shorten Labor Government will invest more than \$1 billion in a National Hydrogen Plan to make Australia a world leader in the burgeoning hydrogen industry. We will do this by:

- **Research, development and commercialisation:** Labor will require ARENA to direct up to \$90 million of its investment budget to support the development and pre-commercial deployment of hydrogen technologies, as well as making hydrogen production, storage and transport a funding priority of the Australian Research Council.
- **Hydrogen deployment and industry development:** Labor will allocate \$1 billion of CEFC funding to support clean hydrogen, from Labor's commitment to double CEFC's capital by \$10 billion, allocate \$40 million from the CEFC Clean Energy Innovation Fund to demonstration and development hydrogen technologies, and require ARENA to allocate \$10 million of its funding to establish hydrogen refuelling infrastructure across Australia.
- **Hydrogen regulatory reforms:** Labor will deliver regulatory changes for hydrogen use,

including developing a ‘Guarantee of Origin’ scheme to certify hydrogen as carbon neutral, having AEMC to examine rule changes to allow for compensation for grid firming by electrolysers, developing international export agreements on hydrogen, and work with states to harmonise regulations for hydrogen vehicles.

- **The National Hydrogen Innovation Hub:** Labor will invest \$3 million to establish the National Hydrogen Innovation Hub in Gladstone. Building on existing expertise and infrastructure, the centre will kick-start early commercialisation of hydrogen technologies, provide a hub for ARENA, researchers and other agencies, and develop opportunities for leveraging LNG infrastructure to support hydrogen exports. Labor will seek expressions of interests from joint ventures between industry and research providers in allocating funding.

6. Transport

6.1 Will you support the following initiatives to encourage the increased uptake of electric vehicles?

- Make electric vehicles less expensive by means such as reducing government fees and charges or by subsidies
- Increase the availability of charging stations;
- Reduce the cost of ownership such as registration fees;

Comments/Explanation/Extended Response:

A Shorten Labor Government will introduce Australia’s first **National Electric Vehicle Policy**, to reduce pollution in the transport sector, slash fuel costs for consumers, improve our fuel security, and create new jobs in local manufacturing, transport and clean energy.

Labor’s Plan:

- **National EV target of 50 per cent new car sales by 2030:** Labor’s national EV target will send a strong signal to car makers to ship a greater range of more affordable EVs to the relatively small Australian market. It will reduce the cost of EVs, create thousands of jobs and substantially cut pollution.
- **Government EV target of 50 per cent of new purchases and leases of passenger motor vehicles by 2025:** A Shorten Labor Government will be a leader in the transition to EVs. This government fleet target will send a strong signal that we expect cost competitive vehicles to be available for fleet purchases and leases. Government EV fleets will also be important in developing a second hand market. Labor will work towards requiring all Commonwealth-owned and -leased office buildings to include the provision of charging infrastructure where appropriate.
- **Growing private EV fleets:** The Australian Investment Guarantee will allow businesses

to immediately deduct 20 per cent off any new EV valued at more than \$20,000.

- **Electrifying Australia’s national road networks:** Labor will establish a \$200 million fund to roll out charging infrastructure across the country. Labor will invest \$100 million to match industry as well as state and local government proposals, building up to a \$200 million fund in total, to deliver around 200 fast charging stations. This fund will target rural and regional Australia and Australia’s most critical road corridors to encourage the take up of electric vehicles.

Please provide details of any other strategies you will support:

In addition, Labor’s Plan includes:

- **Regulatory reforms and COAG agenda:** Labor will require all federally funded road upgrades to incorporate EV charging infrastructure, work with states to ensure new and refurbished commercial and residential developments include EV charging capacity, promote national standards for EV charging infrastructure and ensure investment in public charging stations meet these standards. Labor will establish an EV COAG agenda to improve coordination of EV take-up and related infrastructure planning.
- **EV Innovation and Manufacturing Strategy:** Labor will work with Industry, State Governments and the Research sector to implement an EV innovation and manufacturing strategy. The strategy will support the establishment of manufacturing, assembly and retrofitting capability in EV vehicles, transportation and supporting infrastructure and services.

6.2 Will you support phasing out the following, and if so by what year?

- new diesel vehicles
- new internal combustion vehicles
- diesel tax rebate
- fringe benefit tax concessions on vehicle usage

Comments/Explanation/Extended Response:

Labor policy emphasis is on improved emissions standards and the introduction of EVs in order to de-carbonise and modernise our fleet.

6.3 Will you support strengthening existing vehicle emissions standards for new vehicles?

Yes

No

Which international model would you use and when would you envisage implementation?

International model:

USA

Yr:

Comments/Explanation/Extended Response:

Labor will introduce vehicle emissions standards to reduce pollution and make the cost of driving a car cheaper for consumers. Labor will aim to deliver standards in line with **105g CO2/km for light vehicles**, consistent with the US standards and Climate Change Authority advice, but will consult on the phase-in timeline and coverage to maximise savings for motorists. Standards will be applied on an average emission basis and be subject to real world testing, rather than imposing blanket mandatory standards on manufacturers or specific car models.

Labor will consult with industry, including retailers, on implementation details, industry will be able to meet the standards by offsetting high emissions car sales with low or zero emissions car sales.

6.4 What measures will you support to encourage growth in public transport provision and usage?

One of the most environmentally sustainable ways of moving people around our big cities is to provide reliable, affordable public transport.

Labor will make big investments in upgrading and expanding the passenger rail networks in Brisbane (Cross River Rail), Sydney (Western Sydney Rail and Western Metro), Melbourne (Monash Rail and Frankston to Baxter Rail Upgrade), Canberra (Light Rail – Stage 2) and Perth (METRONET).

6.5 What other initiatives will you support to reduce emissions in the transport sector?

- While there is currently no commercially viable alternative to the internal combustion engine when it comes to powering heavy vehicles, emission reductions can be achieved by **modernising the Australian trucking fleet**. Labor's Australian Investment Guarantee will help incentivise trucking operators to upgrade their vehicles to modern, safer and far less polluting vehicles.

- **Low Emission Transport Strategy:** Labor will also develop a Low Emission Transport Strategy to inform future policy development across transport more broadly, including maritime, aviation, rail and heavy vehicles.

7. Coal and Gas Mining

7.1 Will you support legislation or regulation to achieve the following? Please indicate the proposed timing for the cessation of the activity.

- | | | |
|--------------------------|---|---------------------------------|
| <input type="checkbox"/> | Stop any coal mining developments in the Galilee Basin | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Stop development of any new thermal coal mines | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Stop development of any new on-shore conventional gas mines | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Stop development of any new offshore gas and oil mines | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Stop development of any new unconventional gas mines | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Phase out thermal coal mining in Australia | <input type="text" value="Yr"/> |
| <input type="checkbox"/> | Phase out natural gas and oil mining in Australia | <input type="text" value="Yr"/> |

Comments/Explanation/Extended Response:

Labor will not provide taxpayers funding to new coal projects.

As the aim of the Labor Party is to form government and enact our policy agenda, we will not pre-judge environmental approvals.

If we were to make an election commitment by providing an undertaking on environmental approvals, then under the EPBC act, any decision based on that undertaking would be unlawful.

7.2 Will you support a review of Adani's licence for the Carmichael coal mine under section 145 of the *Environment Protection and Biodiversity Conservation Act*?

- Yes No

Comments/Explanation/Extended Response:

See answer to question 7.1.

7.3 Will you support ruling out public funding in any form to support fossil fuel mining?

Yes No

Comments/Explanation/Extended Response:

No.

7.4 Will you support strengthening of legal and regulatory requirements for mining companies to rehabilitate closed mine sites? Yes No

How?

Labor knows there are significant legacy issues when it comes to rehabilitating closed mine sites. We also know there are substantial employment opportunities in mine rehabilitation once a mine ceases operation. In government we will engage with all stakeholders on whether the current regulatory regime is adequate.

7.5 What strategies will you support to promote the transition away from coal and gas mining, including assistance for the affected workforce and local communities? Please include details of funding.

In order to **assist workers and local communities** during the transition period, Labor will:

- **Establish an independent Just Transition Authority (JTA)** to plan and coordinate the structural adjustment response to inevitable future station closures. The JTA will be a statutory body that works with companies, workers, unions, local communities, state governments and other Commonwealth departments to:
 - Develop and implement transition plans for affected regions, including economic diversification;
 - Develop and oversee pooled redundancy schemes; and
 - Develop and administer labour adjustment packages

The JTA will ensure that representatives from the energy industry, unions and the local communities have direct input into its operations. The establishment of the Authority will have a budget cost of \$8.5 million over the forward estimates.

- **Require all large generators to provide at least three years notice of closure**, as recommended by the Finkel Review and enshrined in an Australian Energy Market Commission rule. Sufficient notice is critical to plan for the economic diversification of a region, put in place worker transition plans, replace generation capacity and maintain energy security.

Additional comments

Please use the space below to tell us more about your views on climate change not already covered. Please attach any additional documents you believe are relevant.

Please see the following URL for a full description of Labor's Climate Change Action Plan:

https://www.alp.org.au/media/1692/labors_climate_change_action_plan.pdf

Thank you!
