

OBAMA'S POLICE STATE VS. NASA'S MISSION FOR MANKIND

On October 16, a Chinese Long March 2F rocket boosted two astronauts, or “taikonauts,” into orbit for a planned month-long stay aboard the Tiangong-2, or the Heavenly Palace-2, space station module. Tiangong-2 is China’s second experimental space station module, an upgraded habitat with improved life support systems, power, communications and research equipment. China is preparing to build a permanent new space station, to be completed by 2022.

The exciting reality is that China is now leading and inspiring the world with its scientifically groundbreaking science initiatives. This includes the first quantum satellite, mankind’s return to the surface of the moon in 2013, the most advanced fusion energy experiment, and China’s 2018-2019 project for mankind’s first rover investigation— including sample retrieval and return—of the far side of the moon. China along with Russia and India are publicly offering cooperation with every nation, and most of the nations of this world are responding in kind. It is infectious, as President John F. Kennedy fully understood.

Instead, in the U.S., we are treated to the endless blare of supposed Russian hackers and tabloid reports of Chinese spies, while Obama single handedly dismantled the U.S. space program, with a little help from people like Texas Republican Congressman John Culberson. Culberson handles the subcommittee on NASA as well as the FBI, and continues to ban U.S. collaboration with China on manned-space exploration projects. Such actions not only restrict human advancement, but are part of an on-going drive by Obama and his British sponsors for world war with China and Russia.

On the cuts to the NASA Constellation Program alone, Obama deserved immediate impeachment. It is clear that Obama, and Congressmen like Culberson, along with the operations of groupings such as the FBI represent a British-treason operation against the development of our nation’s future.

Subverting Science

The FBI—the investigative arm of the Department of

Justice—has shown again and again its hostility to American advances in science and technology. It attempted to strip Albert Einstein of his American citizenship. It attempted to frame-up the very competent NASA Administrator James Beggs, and eventually succeeded in forcing his resignation, with disastrous results for American science. In the 1980s, the Bureau went after Lyndon LaRouche and put an end to the Strategic Defense Initiative, a program based on U.S.-Soviet scientific cooperation to implement new physical principles, and, eventually, sent LaRouche unjustly to prison. It is the FBI—in connivance with the Obama administration and media outlets—which dominate the surveillance police state otherwise known as the 2016 national election—all while threatening a race to thermonuclear war with Russia and China, rather than a race to the moon.

Under FBI dominance and with the death of President Franklin Roosevelt, followed later by the targeted assassination of President Kennedy, the United States has had no higher mission, and currently has no effective space program to speak of. No plan to return to the Moon, not even a manned rocket program to get to the space station. We cannot get reliably beyond Low Earth Orbit—except with Russia’s help.

John F. Kennedy’s Speech to the United Nations

Recall President Kennedy’s September 20, 1963 speech to the United Nations, only months after the Cuban Missile Crisis, and just two months before his assassination:

“Finally, in a field where the United States and the Soviet Union have a special capacity—in the field of space—there is room for new cooperation, for further joint efforts in the regulation and exploration of space. I include among these possibilities a joint expedition to the moon... Why, therefore, should man’s first flight to the moon be a matter of national competition? Why should the United States and the Soviet Union, in preparation for such expeditions, become involved in immense duplications of research, construction, and expenditure? Surely we should explore whether the scientist and astronauts

of our two countries—indeed of all the world—cannot work together in the conquest of space, sending someday in this decade to the moon not the representatives of a single nation, but the representatives of all of our countries.”

President Kennedy proposed then what China proposes today!

The Case of Albert Einstein

During the Truman/McCarthy Red Scares, Albert Einstein stepped forward against the lies. Below is an excerpt of a letter from Einstein, originally a personal letter of advice to a targeted high-school English teacher in Brooklyn, William Frauenglass. The two of them then jointly submitted that letter to the New York Times:

“Reactionary politicians have managed to instill suspicion of all intellectual efforts into the public by dangling before their eyes a danger from without. Having succeeded so far, they are now proceeding to suppress the freedom of teaching and deprive of their positions all those who do not prove submissive, i.e., to starve them out...”

Albert Einstein’s letter, which reveals the moral strength of character required of great scientists, calls upon fellow intellectuals to act in, “the revolutionary way of non-cooperation in the sense of Gandhi’s. Every intellectual who is called before the committees out to refuse to testify, i.e., must be prepared for jail and economic ruin, in short, for the sacrifice of his personal welfare in the interest of the cultural welfare of this country...”

The letter appeared on the front page of the New York Times, June 12, 1953.

Not surprisingly, J. Edgar Hoover and the FBI had been targeting the world’s greatest living scientific genius since 1932, and were, at that very time, attempting to build a case for stripping Einstein of his American citizenship! Should we be surprised that the Nazi leader, Heinrich Himmler, was on J. Edgar Hoover’s special correspondents list until 1939?

The Nazi FBI

Then there’s the targeting of the pioneers of our U.S. space program, many of whom were German-American, brought to the U.S. after Hitler was defeated. When we read about the lives of Wernher von Braun, Krafft Ehrlicke, Robert Goddard, or Hermann Oberth, we encounter an optimism that sprung up and grew, almost entirely without the “necessary objective or propitious conditions.” What they shared—and this is most fully and beautifully expressed in the writings of rocket scientist Krafft Ehrlicke—was the power of genius: to create what had never existed before!

Yet it was the inspired German-American rocket scientists and engineers, who built both the U.S. ballistic missile

and the space program, who were singled out and targeted by the Justice Department’s Office of Special Investigations and the FBI for their Nazi sympathies, but the only thing Nazi was the FBI itself.

“Operation Lightning Strike”

Mankind’s inherent spirit of cooperation, especially in the exploration of the frontiers of knowledge and space exploration, is mission critical. However in the United States, it has been simply, viciously suppressed, again and again by the FBI and related agencies, and this must now end. What has been the consequence of this sweep of FBI-policed manipulation and secrecy?

In 1991, after the fall of the Berlin Wall and the opening of the world politically, the FBI deliberately targeted our nation’s manned NASA space program, headquartered at the Johnson Space Center in Houston, TX. This FBI operation was code-named “Operation Lightning Strike.” Directed and coordinated from FBI headquarters in Washington, D.C., Special Agent Hal Francis was deployed to Houston as “John Clifford.” A company was fabricated, complete with a phony financial history and ratings. The intention was not to actually sting a known criminal. There was no actual evidence that anyone at Johnson Space Center was committing, or intended to commit any crime. It was meant to disrupt and contaminate the environment, one ripe for new international collaboration.

“Operation Lightning Strike” officially ended in December, 1993, and after two years there was absolutely no record of criminal activity unearthed. A year later, in 1994, former NASA Administrator James Beggs said what he thought of “Operation Lightning Strike”:

“I think the whole idea of the government running stings in which you [use] government employees who lie and offer bribes with impunity, I think that’s outrageous. I don’t see any difference in that from what the Nazis did. What really disturbs me about them doing this kind of thing to NASA is that you sow the seeds of distrust among the people in the agency who are responsible for running a very difficult and exceedingly hazardous program. To sow the seeds of distrust, deliberately, in that program is about as despicable and disgusting and rotten a thing to do as I can imagine.”

James Beggs knew well. The FBI had originally targeted then-NASA Administrator Beggs in 1985, and forced his resignation. One month after James Beggs had been forced to resign as Administrator, with NASA now under the incompetent Acting Administrator, NASA Space Shuttle orbiter Challenger was launched from Kennedy Space Center in freezing weather, resulting in the death of seven of our precious astronauts. If James Beggs had been at the Florida launch site that day, as he surely would have been, that fatal launch would most likely not have occurred.

FBI Targets China Today

As China becomes the most scientifically advanced space-faring nation on the planet, more FBI witch-hunts have come to target Chinese-American scientists. Wen Ho Lee, a Taiwanese-born scientist at Los Alamos National Laboratory, was indicted in 1999 for stealing nuclear weapons designs and sharing them with China. He spent nine months in solitary confinement before all of the charges were dropped. Xiaoxing Xi, chair of the Physics Department of Temple University, working in superconductors, was arrested with his family at gunpoint by the FBI in 2015, before prosecutors withdrew all charges, leaving Xi and his family (and potential scientific collaborators) living and working in an environment of fear. Other cases are ongoing, including that of Szuhsiung "Allen" Ho, a nuclear engineer and consultant, who has been jailed since April and whose trial is set for 2017.

On October 20, 2016, NASA Administrator Charles Bolden reported on his blog that he had just participated in the second U.S.-China Civil Space Dialogue. This forum was organized by the U.S. State Department, so that NASA could participate—NASA is banned by Congress from working with China on manned space exploration. The Chinese

freely told us about their manned program, but we could not tell them about ours. Truth be told, there is not much to tell! Indeed, we are on the outside looking in.

Returning to Alexander Hamilton, and Space

The passage of JASTA bill, which targets the Obama-British backed Saudi terror apparatus, and the overwhelming override of Obama's treasonous veto, was a major victory! It came on the heels of the declassification of the "28 Pages" of the Joint Congressional Inquiry into 9/11, and more fully exposed the Bush/Obama/FBI ongoing cover-up of the British-Saudi role in the slaughter of September 11, 2001. We must not stop!

We will have no future on the frontiers of science, and no nation, unless we regain the high-ground of Alexander Hamilton's dictum: "to cherish and stimulate the activity of the human mind, by multiplying the objects of enterprise." We must finally rid ourselves of the British-spawned FBI's noxious influence, and all it stands for, in our national life.

The best option for the United States is immediate and in-depth collaboration with Russia and China on space exploration, fusion energy, and fundamental scientific advancement. It is the FBI that will be facing further investigations.
