

Noise and vibration monitoring in the area of Jimmie Simpson Recreation Centre

Beginning January 21, 2021

What is the Ontario Line Transit Project?

The Ontario Line will connect communities with 15.5 kilometres of transit service, making it faster and easier for hundreds of thousands of people to get where they need to be each day. It will also help alleviate congestion on transit and roads by providing 17 new connections to GO trains and TTC service. What is happening?

As part of the Environmental Studies necessary to advance the Ontario Line project, Metrolinx is conducting one day of visual scouting and non-invasive noise and vibration monitoring using handheld instruments inside and near the Jimmie Simpson Recreation Centre. Using this information, Metrolinx can build on existing information from previous studies in this area.

WHAT TO EXPECT

- A two-person crew working on behalf of Metrolinx will measure noise levels using a handheld sound meter.
- To measure vibration levels, a vibration recorder will be placed on the ground by hand and will be there for approximately two hours while crew members are attending to it. It will be removed immediately thereafter.
- Access to park green space and park amenities will be maintained at all times.
- There will be no noise, pedestrian or traffic impacts associated with this work.

TIMING

- Work is expected to begin on January 21 and end on the same day.
- Work will occur between **9 a.m. and 4 p.m.**
- Work could be rescheduled and delayed due to weather conditions or any unforeseen circumstances.
