

Hydrogeology work on Dundas Street East, Tiverton Avenue and Logan Avenue

Beginning January 28, 2021

What is the Ontario Line Transit Project?

The Ontario Line will connect communities with 15.5 kilometres of transit service, making it faster and easier for hundreds of thousands of people to get where they need to be each day. It will also help alleviate congestion on transit and roads by providing 17 new connections to GO trains and TTC service. What is happening?

To advance design concepts and other structural plans for the Ontario Line, Metrolinx is conducting hydrogeology activities including well development, gas monitoring and groundwater sampling by pumping out water from existing wells into steel drums or buckets to gather information and evaluate underground conditions. Using this information, Metrolinx can begin to determine the construction approach for this project.

WHAT TO EXPECT

- During work hours, some lane reductions may be required, and some traffic delays are expected. Every effort will be made to minimize disruptions.
- Residents and businesses near the work site can expect to hear noise caused by trucks, generators and other construction equipment related to this work. This work is expected to be quieter than the investigative drilling work that took place in these locations previously.
- Please take care when walking near construction areas. Watch for additional signs directing pedestrians as detours may be required.

TIMING

- Work is scheduled to start January 28, 2021 and last up to two weeks.
- Work will occur between **9 a.m. and 5 p.m., Monday to Friday**. Specific work times may depend on permits from the City of Toronto.
- Actual hydrogeology work will be sporadic over this time period because pumping will not be required every day at each location. The field crew will work for a few hours at each location before moving to the next marked location.
- Work could be rescheduled and delayed due to weather conditions or any unforeseen circumstances.
