

Spector Scientific Lab is committed to providing continuity of care through innovative and adaptable testing solutions in response to the SARS-CoV-2 pandemic.

COVID-19 Testing

Spector offers a molecular PCR test for SARS-CoV-19-2, the virus that causes COVID-19, with a 24-48 hour turnaround time.

TESTING TYPE

Molecular testing is used to detect SARS-CoV-2 in respiratory specimens of patients suspected of having COVID-19. This is the only testing currently available for diagnosing infected patients. It plays a critical role in diagnosing infectious individuals early in the course of the disease to enable them to isolate and prevent the spread of the virus to others.

The only Laboratory in the Nation that provides COVID19 results in 24-48 hours or even earlier

Personal Account Manager and Technician for your clinic
no staying on hold anymore

Spector driver picks up samples on the day of the collection
no shipping involved

COVID19 great quality swabs with the same day delivery

COLLECTION

Nasopharyngeal (NP) swabs are the preferred specimens for SARS-CoV-2 testing. This assay is performed by Real Time Reverse-Transcriptase Polymerase Chain Reaction (Real Time RT-PCR). Samples are to be collected in accordance with the Centers for Disease Control and Prevention (CDC) and Florida-issued guidelines. Spector will supply kits and all necessary instructions for proper packing and transport of specimens. It plays a critical role in diagnosing infectious individuals early in the course of the disease to enable them to isolate and prevent the spread of the virus to others.

ORDERING & REPORTING

Call Spector Scientific Lab Client Services for assistance with ordering requisitions and supplies. Results will be available electronically within an average 24-48 hour turnaround time via fax or Spector's healthcare results portal.

SENSITIVITY, SPECIFICITY, AND CROSS-REACTIVITY

Sensitivity: 20ng/ml

Specificity: >99% Specificity

Cross-reactivity: No cross reactivity with other common respiratory viral infections
