Notes:

The full-day SRR is adjusted based on the 1.02% COLA and 5% increase made in the FY15-16 Budget Act.

The RMR, based on the 85th percentile of the 2009 RMR + 10.1% deficit factor, is adjusted based on the 4.5% increase made in the FY15-16 Budget Act.

The Regional Market Rate Survey classifies Age Group 2 as 2 through 5 years. However the SRR applies an adjustment factor of 1.4 to toddlers (18 months up to 36 months). When comparing the SRR w/o the adjustment factor to the RMR, the SRR is LOWER than the RMR in all counties. For programs serving toddler age children, there are 43 counties where the SRR + toddler adjustment factor is HIGHER than the RMR. There are 15 counties where the RMR is HIGHER than the SRR + toddler adjustment factor. RMR rates bolded in red show a lower RMR than the SRR + toddler adjustment factor.
