

# Water

## TOP HACKS FOR POSITIVE ACTION

### SAVING WATER AND MONEY FROM GOING DOWN THE DRAIN

- Fix those leaks - A dripping tap can waste over 40 litres of water a day
- Scout out leaky pipes - Mouldy walls or constant damp patches in the garden are a telling sign. Get in touch with a plumber or [Sydney Water](#).
- Run your dishwasher on a full load and choose a 5-star rating dishwasher
- Wash your dishes in the sink the good, old fashioned way
- Get a water efficient showerhead - Newer models have a good flow and you can almost halve your water use
- Take power showers – 3-4 minutes, or one song, should be long enough
- Flush with pride - Choose a dual flush toilet or low-flow toilet
- Wash clothes on a full load - It will save you buckets on your water and energy bills
- Pick up dog poo and litter to keep our waterways clean
- Choose the right plants for your soil and climate  
- Let nature do the work for you!
