

Climate and Environment Policy

As passionate outdoor enthusiasts, SFF Tasmania has a strong motivation to protect our natural environment through intelligent, data-driven conservation efforts. As such, we fully support the exploration and development of alternative, renewable energy sources and greener technologies. We also support responsible farming, fishing and agricultural practices that do the least harm to the natural environment and ensure the sustainable use of natural resources.

If elected, SFF Tasmania will use their vote in parliament to:

- Introduce community education programs that encourage the public to take personal responsibility for their energy consumption and for reducing personal waste.
- Introduce free energy efficiency audit programs and assistance with energy efficient appliances for pensioners.
- Protect vulnerable native fauna from the destruction caused by feral cats by introducing a bounty on feral cats in state and national forests and on agricultural land.
- Develop grant programs to encourage farmers to explore regenerative farming practices and carbon sequestering.
- Severely limit and restrict the use of inhumane and destructive biological poisons to control wildlife and problem animals.
