

NAB:

Climate leadership

Or

Climate denial?

The International Energy Agency recently called for an end to new coal, oil & gas funding in order to limit global warming to 1.5°C.

By September, NAB will finalise its Oil & Gas Policy.

After years of funneling billions into fossil fuels, key NAB decision makers like Board Chair, **Phil Chronican**, now have a clear choice to make.

Will they choose to heed the authoritative international experts on climate and energy policy, or **will they wilfully ignore the experts and push us towards a dangerously warmer world?**

Will NAB choose climate leadership or climate denial?
