## [Sick of Communist-Like Censorship? – Here's A List of Popular Uncensored Media Options](#)

By [Patty McMurray](#) – Published January 11, 2021 at 3:11pm

“With the current media purge of conservative, libertarian, independent, and non-establishment voices in high gear, we thought it would be beneficial to list some of the alternatives to each globalist media platform. This does not constitute official endorsements and this list is by no means exhaustive. So please do check back to this article for additional sources from time to time.

“The great news is, there are many amazing options to stay connected to each other and to the news. They aren’t all as evolved as the multi-billion dollar corporations you are used to, but most are competent technically and already have many users. Also, you may find that some of the platforms provide better functionality than the legacy media you are leaving.

“We believe this list is a good start to get the message out as rational free-thinking Americans on all sides of the aisle sever their ties to authoritarian anti-speech platforms.”

## And this just in from Wikipedia, 01/13/2021...

Wikipedia is now publishing slanderous descriptions of Parler and basically every other new or alternative social networking platform, especially those that are popular with individuals, groups, and organizations that question the veracity of the 2020 Presidential election. Virtually verbatim slander as shown here is being used to describe MeWe, Signal, and BitChute.

Not that Wikipedia was every truly a reliable source of information, now we know for certain that we must question everything they publish.

### Parler

Parler is an American alt-tech microblogging and social networking service. Parler has a significant user base of Donald Trump supporters, conservatives, conspiracy theorists, and right-wing extremists. Posts on the service often contain far-right content, antisemitism, and conspiracy theories such as QAnon. [Wikipedia](#)

|  | Telegram is a cloud-based mobile and desktop messaging app with a focus on security and speed. Telegram is a freeware, cross-platform, cloud-based instant messaging software and application service. The service also provides end-to-end encrypted video calling, VoIP, file sharing and several other features. It initially launched in 2013.                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                  |
